

Mount Sinai Rehabilitation Center

2023 Scorecard Stroke Specialty Program

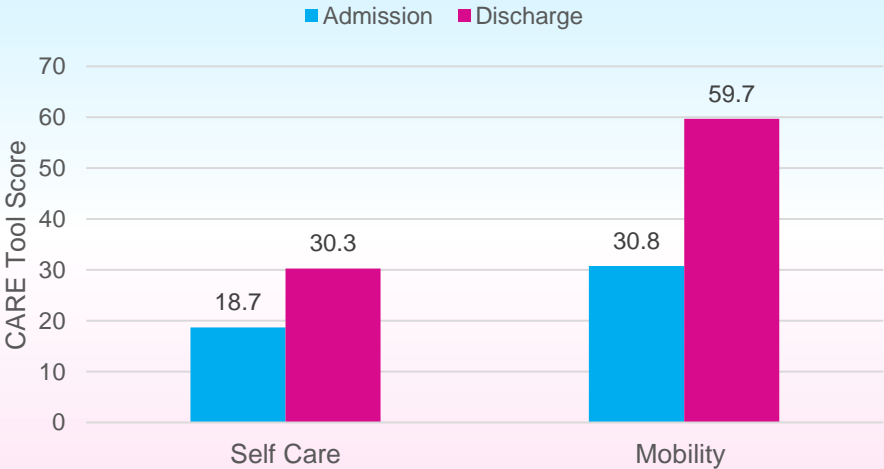

Furthering ability through clinical care, science, education and innovation

Patients Served: 188

Average Age: 64 years old

Average Length of Stay: 19.2 days

Functional Improvement

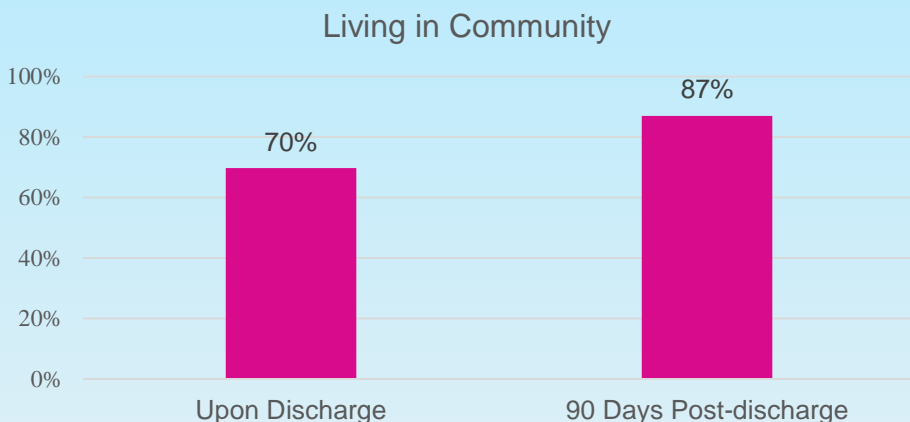

The effectiveness of rehabilitation care is measured by improvement in functional status. This quality measure demonstrates the change in scores for self-care and mobility from admission to discharge. Our patients make significant gains in function and independence during their stay.

Intensity of Therapy

On average, our patients receive 3.2 hours of therapy per day, including Physical and Occupational Therapy, Speech Language Pathology and Neuropsychology. Supplemental activities are offered daily by our Therapeutic Recreational Specialists.

Discharge

The majority of our patients are discharged back to the community following inpatient rehabilitation. Some patients (21%) require further rehabilitation in a sub-acute setting prior to returning home. A small percentage (9%) require transfer to the acute hospital for further medical management.

Patient Satisfaction

99% of patients are satisfied with the Stroke Specialty Program

"My husband was a patient twice this year, about 5 weeks in all. I don't know how another facility could provide better overall care.

Keep up the good work!"

- Press Ganey, 2023
