

# The Mount Sinai Health System

## Comprehensive Endocrine Surgery Program

When you need expert surgical care of disorders involving the endocrine system, look no further than the Comprehensive Endocrine Surgery Program at Mount Sinai. From the parathyroid and thyroid glands to the adrenal gland and neuroendocrine system, our team of experts works across specialties to ensure that our patients receive coordinated, compassionate care.

In addition to traditional methods, our surgeons also offer a unique type of remote access "scarless" thyroid surgery called the transoral endoscopic thyroidectomy vestibular approach (TOETVA).

### Mount Sinai Thyroid Center

At the Mount Sinai Thyroid Center, endocrinologists, surgeons, radiologists and pathologists work together to create a personalized treatment plan for each individual patient. Thyroid cancer patients are discussed at our Thyroid Tumor Board to determine the optimal management strategy.

### Endocrine Surgery Parathyroid Program

Our team has considerable expertise localizing parathyroid glands prior to surgery via surgeon-performed ultrasound and 4-D CT scanning. Our surgeons employ minimally invasive techniques guided by intraoperative PTH monitoring to provide the best possible outcomes.

### Multiple Endocrine Neoplasia (MEN) Program

Our surgeons specialize in treating patients with MEN and familial endocrine disorders. Our team will work to coordinate care which is often complex, and engage specialists to fashion a unique treatment plan.

### Mount Sinai Adrenal Center

Our surgeons work closely with endocrinology, radiology, pathology and medical oncology to arrive at a tailored treatment plan, and utilize the latest laparoscopic and robotic techniques. All cases are discussed at the multidisciplinary tumor board to create a personalized course of care.

### Mount Sinai Center for Carcinoid and Neuroendocrine Tumors (NET)

Our Center is an international destination for patients looking for expertise for these rare tumors. All cases are presented and discussed at our multidisciplinary NET tumor board in order to gain consensus on a personalized treatment plan.
