Multiple Myeloma Program
Who we are

The Multiple Myeloma Program at Mount Sinai is one of the largest in the country. We are known throughout the world as a leader in multiple myeloma patient care and translational research.

We provide comprehensive, personalized care with an emphasis on novel therapies that offer the best chance for good outcomes with a high quality of life. Our physicians are internationally recognized in the diagnosis and treatment of multiple myeloma, as well as related diseases such as Waldenstrom Macroglobulinemia, Castleman Disease, and Amyloidosis.

We utilize a collaborative, multi-disciplinary team approach that includes Mount Sinai’s vast network of specialists in Pathology, Radiology, Immunology, Genomics, Infectious Diseases, Bone Marrow Transplantation, Cardiology, and Nephrology. Our patients benefit from cutting-edge treatments available only at an academic center like Mount Sinai that is actively advancing scientific breakthroughs.

Our focus is on precision medicine based on each patient’s unique disease profile.

We are an integral part of Mount Sinai Cancer and The Tisch Cancer Institute, which is a National Cancer Institute-Designated Cancer Center. This prestigious designation recognizes our standards of excellence and accomplishments in research aimed at prevention and cure.

Mission

Our mission is to provide comprehensive, compassionate care for patients with multiple myeloma and related diseases and advance innovative research and personalized treatments that lead to cure.

Hallmarks of our Multiple Myeloma Program

• Comprehensive, Personalized Care
• Extensive Experience
• Translational Research Excellence

Clinical Expertise

Our myeloma physicians have extensive experience — more than 30 years for some — treating patients with myeloma and related diseases. They have pioneered innovative treatments that have become standards of care worldwide. In addition to possessing the clinical expertise that comes with years of practice, they practice the art of medicine with an awareness of the whole patient and thoughtful attention to each individual.

All members of our health care team — physicians, advanced practice nurses, registered nurses, physician assistants, social workers, pharmacists, and more — have specialized training and provide highly-skilled care in both the inpatient and outpatient settings.

Multiple myeloma is a complex cancer. It is best treated by physicians who see myeloma patients day in and day out and who have an in-depth understanding of myeloma biology.
Research Expertise
Our scientists perform cutting-edge research that integrates advances in genomics and immunotherapy. In collaboration with experts across the Mount Sinai network, they are investigating:
• New therapeutic targets for disease that is resistant to treatment
• Vaccines that are customized to a patient’s genetic mutations
• Repurposing of drugs to treat specific myeloma subtypes
• Prevention of progression from precursor conditions — monoclonal gammopathy of undetermined significance (MGUS) and smoldering myeloma — to active myeloma
Utilizing state-of-the-art technology for data analysis, our scientists translate research findings into novel clinical applications.

Clinical Trials
Our program has a solid foundation of patient care excellence with clinical trials that feature the latest treatments. We conduct Mount Sinai-specific trials and also participate in multicenter studies with other cancer centers.

Supportive Care
Patients benefit from our supportive care network that includes doctors in specialties such as Infectious Diseases, Cardiology, and Nephrology, as well as social workers and other members of the health care team.

Making an Appointment
Patients and referring physicians can call us at 212-241-7873 to arrange an appointment.

We partner and work collaboratively with referring physicians to ensure continuity of care.

Mount Sinai’s Department of International Services can coordinate travel and logistics and assist with paperwork required for international medical treatment.

Location
We are located at The Mount Sinai Hospital campus, which stretches from East 98th to 102nd Streets between Madison and Fifth Avenues. The outpatient clinic is in the Derald H. Ruttenberg Treatment Center in the Leon and Norma Hess Center for Science and Medicine at 1470 Madison Avenue.

Why Choose Mount Sinai for Myeloma Care?
• Experienced physicians
• Multi-disciplinary team approach
• Access to Mount Sinai’s network of experts
• Research-driven treatments
• Emphasis on the whole patient
• Clinical trial excellence
• Supportive care with skilled specialists
• Warm, caring environment for patients and their loved ones
