MISSION STATEMENT

The Genetic Disease Foundation (GDF), a 501(c)(3) corporation, was established in 1997 by patients, parents and families who have suffered from genetic diseases. The Foundation's mission is support research and education to prevent and cure genetic diseases and birth defects. Specifically, the GDF supports research to discover effective treatments and cures for genetic diseases and to improve and expand genetic testing to ultimately prevent these devastating diseases. Vital to the Foundation's mission is the education for patients, physicians, and the public to increase awareness about genetic disorders as well as the availability of genetic testing and counseling.

Your support of this evening's event will ensure the needed financial resources to continue and accelerate the Foundation's efforts to prevent, treat and cure genetic diseases.
