

I've had COVID-19.

Do I need to get vaccinated?

Yes. 

- The antibodies you gained from having COVID-19 may not be as robust as the ones you will get from vaccination, especially if you were diagnosed with COVID-19 some time ago.
- Vaccination will make your immunity even stronger, which is especially important as the highly contagious Delta variant spreads.
- **Getting vaccinated is the best way to help end the pandemic, and protect yourself, your loved ones, and your co-workers.**
