Multiple Myeloma Program
Our myeloma physicians have extensive experience—more than 30 years for some—treating patients with myeloma and related diseases. They have pioneered innovative treatments that have become standards of care worldwide. In addition to possessing the clinical expertise that comes with years of experience, they practice the art of medicine with an awareness of the whole patient and thoughtful attention to each individual.

All members of our health care team have specialized training and provide highly-skilled care in both the inpatient and outpatient settings.

Multiple myeloma is a complex cancer. It is best treated by physicians who see myeloma patients day in and day out and who have an in-depth understanding of myeloma biology.

Supportive Care
We support patients and their loved ones with a focus on individual needs and sensitivity to diversity.
Research Expertise
We are conducting groundbreaking research that integrates advances in genomics and immunotherapy, and that translates findings into novel clinical applications. In collaboration with experts across the Mount Sinai network, we are investigating:
• New therapeutic targets for resistant disease
• Patient-specific, customized vaccines
• Repurposing of drugs to treat disease subtypes
• Prevention of progression from precursor conditions—monoclonal gammopathy of undetermined significance (MGUS) and smoldering myeloma—to active myeloma

Clinical Trials
Our program has a solid foundation of patient care excellence with clinical trials that feature the latest treatments. We conduct Mount Sinai-specific trials and also participate in multicenter studies.

Making an Appointment
Patients and referring physicians can call us at 212-241-7873 to arrange an appointment. We partner and work collaboratively with referring physicians to ensure continuity of care. Mount Sinai’s Department of International Services can provide assistance to patients from outside the US.

Why Choose Mount Sinai for Myeloma Care?
• Experienced physicians
• Multi-disciplinary team approach
• Access to Mount Sinai’s network of experts
• Research-driven treatments
• Emphasis on the whole patient
• Clinical trial excellence
• Supportive care with skilled specialists
• Caring environment for patients and their loved ones

Samir Parekh, MD, Associate Professor, and Deepak Perumal, PhD, Senior Scientist, investigate new drug targets for myeloma.
