

Mount Sinai Rehabilitation Center 2017 Scorecard Amputation Specialty Program

Furthering ability through clinical care, science, education and innovation

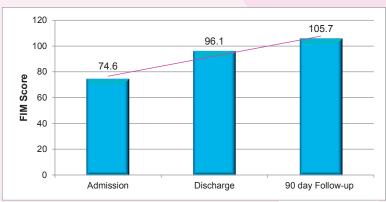

Patients Served: 22

Average Age: 59.8 years old

Average Length of stay: 13.7 days

Functional Improvement

The Functional Independence Measure (FIM) is the gold standard for measuring function in the rehabilitation industry. Our patients make significant gains in function and independence during their inpatient stay and outpatient program.

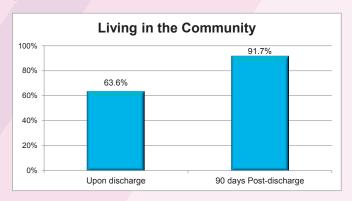

Goal Attainment

Almost 80% of our patients meet their goals during their stay at the Mount Sinai Rehabilitation Center

Intensity of Therapy

On average, our patients receive 3.2 hours of therapy per day, including Physical and Occupational Therapy, Speech Language Pathology and Neuropsychology. Supplemental activities are offered daily by our Therapeutic Recreational Specialists.

Discharge

The majority of our patients are discharged back to the community following inpatient rehabilitation. Some patients (22.8%) require further rehabilitation in a sub-acute setting prior to returning home. A small percentage (13.6%) require transfer to the acute hospital for further medical management.

Prosthetic Use

75% of patients discharged from our Center have been fitted for a prosthesis.

83% are using the prosthesis for walking.

Patient Satisfaction

91.7% of patients are satisfied with the Amputation Specialty Program
