

Mount Sinai Rehabilitation Center

2017 Scorecard

Brain Injury Specialty Program

Furthering ability through clinical care, science, education and innovation

Patients Served: 172

Average Age: 57.8 years old

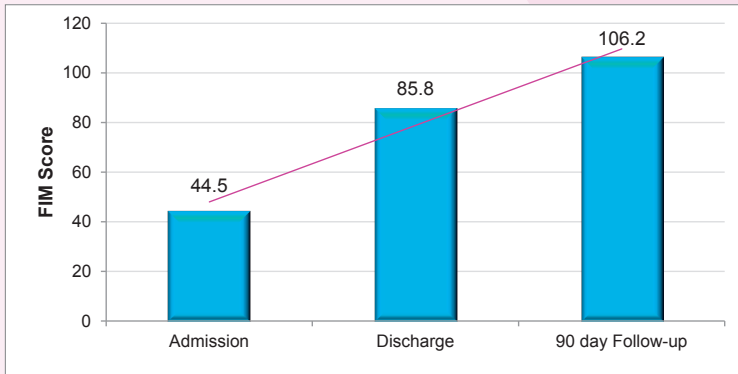

Average Length of Stay:

Traumatic Brain Injury 19.9 days

Non-Traumatic Brain Injury 14.6 days

Functional Improvement

The Functional Independence Measure (FIM) is the gold standard for measuring function in the rehabilitation industry. Our patients make significant gains in function and independence during their inpatient stay and outpatient program.

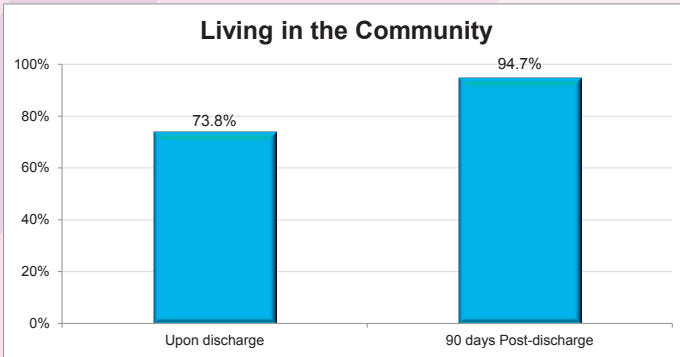

Goal Attainment

Over 85% of our patients meet their goals during their stay at the Mount Sinai Rehabilitation Center.

Intensity of Therapy

On average, our patients receive 3.2 hours of therapy per day, including Physical and Occupational Therapy, Speech Language Pathology and Neuropsychology. Supplemental activities are offered daily by our Therapeutic Recreational Specialists.

Discharge

The majority of our patients are discharged back to the community following inpatient rehabilitation. Some patients (14%) require further rehabilitation in a sub-acute setting prior to returning home. A small percentage (12.2%) require transfer to the acute hospital for further medical management.

Patient Satisfaction

96.5% of patients are satisfied with the Brain Injury Specialty Program

“Absolutely the best hospital I have ever been admitted to. The best staff ever. Some of the nicest people I’ve met in my life. They made my recovery so much easier.”

– Press Ganey, 2017
