

Brain Injury Specialty Program

BY THE NUMBERS

174 Patients Served

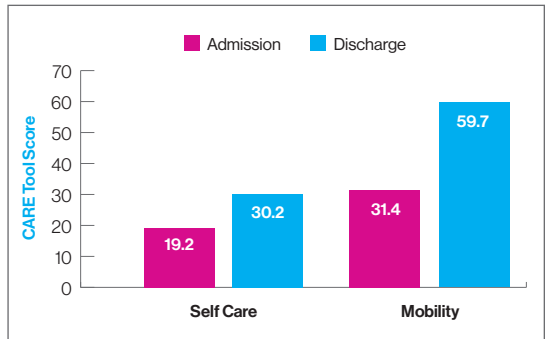

59 Average Age

21.4 Average Length of Stay (days):
Traumatic Brain Injury

18.5 Average Length of Stay (days):
Non-Traumatic Brain Injury

Functional Improvement

The effectiveness of rehabilitation care is measured by improvement in functional status. This quality measure demonstrates the change in scores for self-care and mobility from admission to discharge. Our patients make significant gains in function and independence during their stay.

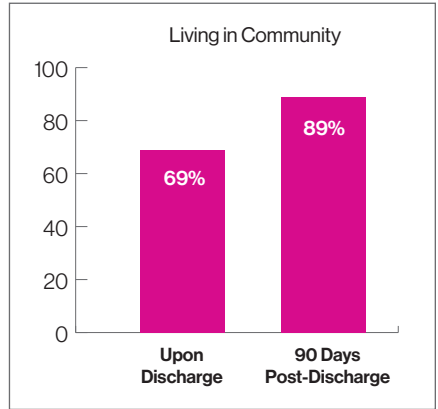

Intensity of Therapy

On average, our patients receive 3.2 hours of therapy per day, including Physical and Occupational Therapy, Speech Language Pathology and Neuropsychology. Supplemental activities are offered daily by our Therapeutic Recreational Specialists.

Discharge

The majority of our patients are discharged back to the community following inpatient rehabilitation. Some patients (15%) require transfer to the acute hospital for further medical management. A small percentage (16%) require further rehabilitation in a sub-acute setting prior to returning home.

Patient Satisfaction

92.4%

percent of patients
satisfied with the Brain
Injury Specialty Program

“ They are the best, they’re persistent, they’re concerned, and they were patient. They care for their patient and when I wanted to give up, they push you to go on. ”
