- **50-64**: 24%
- **35-49**: 16%
- **19-34**: 11%
- **19-34**: 11%
- **80+**: 11%
- **0-18**: 2%

**Intensity of Therapy**

On average, our patients receive 3.2 hours of therapy per day, including Physical and Occupational Therapy, Speech Language Pathology and Neuropsychology. Supplemental activities are offered daily by our Therapeutic Recreational Specialists.
**Functional Improvement**
The effectiveness of rehabilitation care is measured by improvement in functional status. This quality measure demonstrates the change in scores for self-care and mobility from admission to discharge. Our patients make significant gains in function and independence during their stay.

**Discharge**
The majority of our patients are discharged back to the community following inpatient rehabilitation. Some patients (17%) require further rehabilitation in a sub-acute setting prior to returning home. A percentage (15%) require transfer to the acute hospital for further medical management.

**Patient Satisfaction**
94% percent of patients satisfied with the programs at The Mount Sinai Rehabilitation Center
