Patients Served: 201

Average Age: 64 years old

Average Length of Stay: 17.5 days

Functional Improvement

The effectiveness of rehabilitation care is measured by improvement in functional status. This quality measure demonstrates the change in scores for self-care and mobility from admission to discharge. Our patients make significant gains in function and independence during their stay.

Data Sources: 2020 Uniform Data System, MedTel
**Intensity of Therapy**
On average, our patients receive 3.2 hours of therapy per day, including Physical and Occupational Therapy, Speech Language Pathology and Neuropsychology. Supplemental activities are offered daily by our Therapeutic Recreational Specialists.

**Discharge**

The majority of our patients are discharged back to the community following inpatient rehabilitation. Some patients (18%) require further rehabilitation in a sub-acute setting prior to returning home. A small percentage (12.4%) require transfer to the acute hospital for further medical management.

**Patient Satisfaction**
96% of patients are satisfied with the Stroke Specialty Program

“The entire staff was very helpful & kind which resulted in a very good experience.”
