BY THE NUMBERS

188 Patients Served

64 Average Age

19.2 Average Length of Stay (days)

Gender Identity

Female 47%
Male 53%

Functional Improvement

The effectiveness of rehabilitation care is measured by improvement in functional status. This quality measure demonstrates the change in scores for self-care and mobility from admission to discharge. Our patients make significant gains in function and independence during their stay.

**Intensity of Therapy**
On average, our patients receive 3.2 hours of therapy per day, including Physical and Occupational Therapy, Speech Language Pathology and Neuropsychology. Supplemental activities are offered daily by our Therapeutic Recreational Specialists.

**Discharge**
The majority of our patients are discharged back to the community following inpatient rehabilitation. Some patients (21%) require further rehabilitation in a sub-acute setting prior to returning home. A small percentage (9%) require transfer to the acute hospital for further medical management.

**Patient Satisfaction**
99% percent of patients satisfied with the Stroke Specialty Program

“... My husband was a patient twice this year, about 5 weeks in all. I don’t know how another facility could provide better overall care. Keep up the good work!”
