Addressing the Cognition Concerns of Multiple Sclerosis Patients

For many people with MS, word-finding struggles, memory lapses, or “brain fog” can feel unsettling. Sarah Levy, PhD, is helping patients better understand these changes—how they’ve evolved with modern treatments, how aging plays a role, and how to protect cognitive health over time.

Mount Sinai Research at ACTRIMS

At the Americas Committee for Treatment and Research in Multiple Sclerosis (ACTRIMS), a leading MS research conference, Mount Sinai experts shared findings focused on earlier detection, smarter imaging, and healthier aging.

From award-winning MRI research to new insights on diet and disease progression, the work reflects a commitment to more personalized and hopeful MS care.

Surgical Relief for Severe Facial Pain

Featured in Mount Sinai’s Specialty Report for Neurology and Neurosurgery, this case presentation highlights how two physicians collaborated to relieve debilitating trigeminal neuralgia in a patient with MS.

When medications failed, surgical treatment provided lasting relief. Five years later, she remains pain-free, demonstrating how coordinated MS and neurosurgical care can transform quality of life.
