Heat Illness at Work

Exposure to extreme heat can be deadly. Thousands become sick every year, and many die due to preventable heat-related illnesses. It is necessary to take precautions when working in excessive heat.

WORKERS WHO MAY BE AT RISK
Agricultural workers  
Bakery workers  
Boiler room workers  
Construction workers  
Factory workers  
Firefighters  
Food service workers  
Miners

Others Risk Factors:
Over 65 years of age  
Overweight  
Having a heart condition  
Taking certain medications

HEAT-RELATED ILLNESSES
It’s important to know the signs of heat-related illness—acting quickly can prevent serious medical conditions and save lives. Workers exposed to extreme heat are also at an increased risk of injuries due to dizziness, sweat, and fogged eye protective gear. If you or a coworker has symptoms of heat-related illness, tell your supervisor right away and seek appropriate medical care.

<table>
<thead>
<tr>
<th>Heat syncope</th>
<th>Heat cramps</th>
<th>Heat rash</th>
</tr>
</thead>
<tbody>
<tr>
<td>Fainting or dizziness from prolonged standing or sudden rising, and is often due to dehydration.</td>
<td>Occur due to heat and excessive sweating during strenuous activity. Heat cramps could also be a symptom of heat exhaustion.</td>
<td>Skin irritation caused by excessive sweating in hot weather. Keep rash dry; ointments and creams should not be used.</td>
</tr>
</tbody>
</table>

PREVENTING HEAT ILLNESS:
• Drink water frequently.  
• Rest in the shade or air conditioning to cool down.  
• Wear a hat and light-colored clothing.  
• Learn the signs of heat-related illness and what to do in an emergency.  
• Keep an eye on fellow workers.  
• Acclimate – “easy does it” on your first days of work; be sure to get used to the heat and allow yourself to build up a tolerance.
