Welcome to the Mount Sinai Health System: A New Era Begins

The Boards of Trustees of The Mount Sinai Medical Center and Continuum Health Partners announced on Monday, September 30, the establishment of the Mount Sinai Health System. This new health system includes Icahn School of Medicine at Mount Sinai, seven major member hospital campuses in New York City, an extensive network of approximately 45 ambulatory care locations, 12 free-standing ambulatory surgery centers, and more than 40 clinical and academic relationships with local health care organizations—all throughout the greater metropolitan region.

Combining the best of both Continuum Health Partners and The Mount Sinai Medical Center will provide the new Mount Sinai Health System with increased efficiency, and provide patients with quality outcomes throughout their lives and at all levels of care. Our comprehensive health system will stand as a model of academic, clinical, and research excellence around the world.

We have been moving toward the establishment of the Mount Sinai Health System for months. In July, following a period of due diligence, the Boards of Trustees of Mount Sinai and Continuum signed a definitive agreement to combine both institutions, pending approval by government authorities, which we have just received.

You will see the effects of the integration immediately, as our leadership team includes individuals from Mount Sinai and Continuum, as well as new appointees. Our outstanding physicians, nurses, and staff from both institutions will work together, delivering extraordinary primary and specialty care to all patients.

With Icahn School of Medicine at Mount Sinai serving as the single medical school for the Mount Sinai Health System, educational training will be integrated throughout the system, guaranteeing patients greater access to sophisticated technology, and some of the most brilliant minds in academic medicine. In turn, our faculty and students will have a vast canvas upon which to develop effective treatments for today’s pressing human diseases, their capabilities extending as far as their creativity will take them.

Community-Based Care Throughout Greater New York

The Mount Sinai Health System has launched a bold new era in community-based care that will provide world-class medical services to millions of people each year. Its vast geographic footprint includes seven member hospital campuses in Manhattan, from Chinatown to Chelsea, and midtown to Morningside Heights, as well as Queens and Brooklyn. It also extends into communities in each borough of New York City, Westchester, Long Island, and New Jersey.

“With an increased number of primary care physicians coordinating patient care, the Mount Sinai Health System will define and provide large-scale population management that is high-quality and highly efficient,” says Kenneth L. Davis, MD, President and Chief Executive Officer of the Mount Sinai Health System.

Mount Sinai Health System at a Glance

**SEVEN MEMBER HOSPITAL CAMPUSES**

1. **Beth Israel Medical Center**
   - Having remained true to its 100-year-old mission, this 856-bed hospital provides compassionate, high-quality care to patients across a broad range of specialties.
   - 280 First Avenue
   - New York, NY 10003

2. **Beth Israel Brooklyn**
   - This 212-bed community hospital has many redesigned facilities, and provides high-quality primary and specialty care.
   - 3201 Kings Highway
   - Brooklyn, NY 11234

3. **The Mount Sinai Hospital**
   - Founded in 1852, this 1,171-bed facility is one of the nation’s oldest and most respected tertiary- and quaternary-care teaching hospitals.
   - One Gustave L. Levy Place
   - New York, NY 10029

4. **Mount Sinai Queens**
   - This 235-bed hospital serves residents of western Queens with high-quality outpatient, inpatient, and emergency services.
   - 25-10 30th Avenue
   - Long Island City, NY 11102

5. **New York Eye and Ear Infirmary**
   - Founded in 1820 as the nation’s first specialty hospital, this 69-bed facility is a leader in the care of all diseases of the eyes, ears, nose, and throat.
   - 310 East 14th Street
   - New York, NY 10003

6. **Roosevelt Hospital (St. Luke’s-Roosevelt Hospital Center)**
   - Founded in 1871, this 505-bed community and tertiary-care hospital has renowned clinical programs and strong partnerships with federally qualified health centers.
   - 1000 Tenth Avenue
   - New York, NY 10019

7. **St. Luke’s Hospital (St. Luke’s-Roosevelt Hospital Center)**
   - Since its founding in 1847, this 523-bed hospital has been the principal health care provider for the communities of West Harlem and Morningside Heights.
   - 1111 Amsterdam Avenue
   - New York, NY 10025

**ONE LEADING MEDICAL SCHOOL**

- **Icahn School of Medicine at Mount Sinai**
  - As one of the nation’s top medical schools, Icahn School of Medicine at Mount Sinai is accelerating the pace of discovery through the integration of cutting-edge research and clinical medicine across the Mount Sinai Health System.
  - One Gustave L. Levy Place
  - New York, NY 10029

A Dynamic Environment for Education, Research, and Innovation

The Icahn School of Medicine at Mount Sinai, one of the nation’s leading medical schools, along with its Graduate School of Biomedical Sciences, will serve to integrate all clinical and research missions for the seven member hospital campuses and vast network of ambulatory facilities in the new Mount Sinai Health System.

“In this rich and dynamic environment, Mount Sinai’s medical and graduate students, as well as our residents and fellows, will be offered an unparalleled range of clinical and research experiences,” says Dennis S. Charney, MD, Anne and Joel Ehrenkranz Dean of Icahn School of Medicine at Mount Sinai and President for Academic Affairs, Mount Sinai Health System. “We will provide them with extraordinary opportunities to train and conduct research in a truly comprehensive and fully integrated health system that treats people of all ages, for every illness and injury.” It is expected that more than 2,000 residents and fellows will train at the new Mount Sinai Health System.

The Health System’s large and diverse patient population will also be the catalyst to establish Clinical Institutes of Excellence across a spectrum of fields. “Our clinical depth within these specialities will increase enormously, helping to provide more opportunities to conduct cutting-edge research and discover new treatments for a great range of medical conditions,” says Dr.

Excellence across a spectrum of fields. “Our clinical depth within these specialties will increase enormously, helping to provide more opportunities to conduct cutting-edge research and discover new treatments for a great range of medical conditions,” says Dr.

System. “If you live in Manhattan, there will almost always be a Health System doctor within walking distance of your residence, as well as a substantial presence of our physicians and facilities in places such as Queens, Brooklyn, Staten Island, and Long Island. Patients will be able to receive appropriate prevention, intervention, and treatment early on, often before a disease progresses.”

There are 430 full-and part-time primary care specialists among approximately 6,600 full-time, part-time, and voluntary physicians in the Mount Sinai Health System.

The Health System’s ambulatory facilities—in locations that include Brooklyn Heights and Manhattan’s Upper West Side—offer walk-in services and extended hours, and “stand as models of innovation,” says Jeremy Boal, MD, Executive Vice President and Chief Medical Officer of the Mount Sinai Health System.

“The facilities house numerous specialty practices in addition to primary care, deliver culturally competent services to a highly diverse population, and offer patients the convenience of one-stop shopping along with the benefits of coordinated care and integrated electronic medical records,” Dr. Boal adds.

Plans call for the Mount Sinai Health System to spend more than $125 million to create an integrated electronic health records system that provides shared access to patient information throughout the system. Expanding the Epic electronic health record system will help eliminate duplicative diagnostic tests, delays in care, and redundant specialty consultation, all of which add unnecessarily to the cost of care.

In a 2012-2013 list of “Most Connected Hospitals,” U.S. News & World Report placed Mount Sinai among an elite group of national medical institutions that have achieved clinical excellence in using an electronic medical record system.

Charney, “Our Clinical Institutes of Excellence will be hubs of translational research and health care innovation.”

All of Continuum’s affiliations with other medical schools will eventually transfer to the Icahn School of Medicine at Mount Sinai, which will be the single medical school for the Health System. “This combination of our scientific and clinical expertise will create a world-class health care system that accelerates the pace of breakthrough treatments, trains highly skilled physicians and scientists, and delivers the most advanced level of care to our patients,” says Dr. Charney.
